

New Start Point

If you have a thread break or your bobbin runs out, move your start point to begin stitching in a spot other than the beginning of the design.

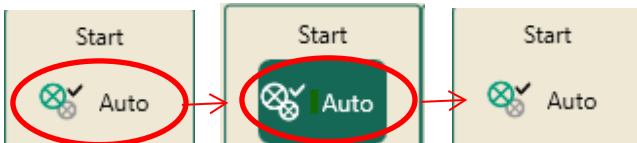

- Press **Pause**.

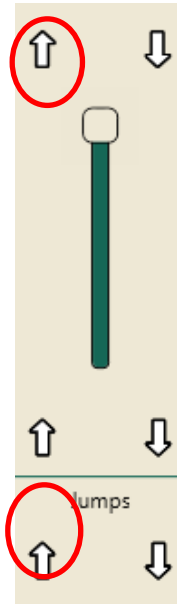

- Your motors are locked, so the machine will not move.
- Select **Pro-Stitcher** tab.
- Press **New Start & End** on the ribbon.

- Touch **Auto** in the Start column twice.

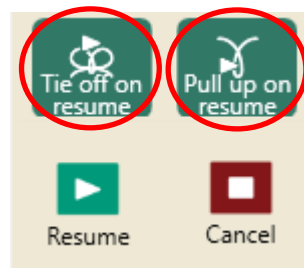

- This will move the start point (the green circle with an X in the middle) to exactly where your needle is.

To adjust the precise position of the start point: Tap the arrow pointing up at the bottom of the slide bar OR top of the slide bar, move the green bullet back to where you want to start stitching again.

- Press **Motors** on ribbon to unlock.
- Now you can move your machine to rethread or change your bobbin.
- Select **Tie off on resume** and **Pull up on resume** if desired, then press **Resume**.

- The machine will start stitching where you set the new start point.
