

Skew: Skew, Border Skew, & Triangle Skew

There are 3 different types of
skews.

*Note: To try out the different
skews, create an area and
open a design.*

- Select **Modify** Tab.

- From the ribbon, select **Skew**.

- Select the skew based on how
many points your area has:

Skew

Skew works best with areas that
have 4 points.

Border Skew

Border skew works best with areas
that have multiple points, like a long
border.

Triangle Skew

Triangle skew only works with areas
that have 3 points.
